

TWENTY-THIRTY.io Announces Launch of Additional \$2030 Token on the Solana Blockchain

Taking big action to spur growth and enhance visibility, additional token minted via pump.fun

Tokyo, Japan — Today, TWENTY-THIRTY.io (\$2030) and the founders/creators/developers (hereinafter referred to as the "Team") announce the launch of an additional \$2030 token on the Solana blockchain as an action to fulfill the following objectives:

- To spur growth and enhance visibility
- To expand the value of what \$2030 can achieve
- To enhance \$2030 as a long-term brand and movement
- To commodify the debts of the kabal driving the New World Order on more than one chain
- To provide more avenues for reaching a market capitalization of 1B USD
- To show strong signs of growth to the market and to make \$2030 even harder for the market to ignore
- To take advantage of the merits of the SOL blockchain
- To take advantage of 9+ months of building trust/transparency/confidence into the \$2030 project and to leverage that infrastructure on another blockchain
- To allow the increased visibility and exposure of \$2030 via the SOL blockchain to reflect positively back onto the \$2030 ETH token ("A rising tide lifts all boats.")
- To give back to the \$2030 community via another \$2030 token but on a project already with 9+ months of proven history, a multitude of infrastructure already built, developers that have worked non-stop daily to build trust, a monopoly on a new and unique narrative that has already been proven as a Proof of Concept, and project management that is undertaken in a C-level fashion

Against this backdrop, the Team comments:

"Two steaks are better than one. This is a completely separate and ADDITIONAL \$2030 coin on SOL. Notice that we are saying 'ADDITIONAL' not 'migrate' or 'bridge'. We would like to strongly state that we are not abandoning the ETH \$2030 token, which continues as one coin as-is, with all existing holders under the \$2030 brand and administration. It's like your favorite coffee shop opens another location in your town closer to you. Two is better than one. It's a sign of growth. \$2030 now has TWO separate coins under project: One on ETH and one on SOL. They are not linked in any way. We hope that these coins' pricings would start to harmonize, like how metronomes come into sync, like [here](#). One chain doing good could promote the other chain doing good. And why shouldn't we be commodifying the debts of the NWO kabal on multiple chains?"

For more information, please see the short FAQ below.

Why not bridge the existing ETH token to SOL?

Bridging from ETH to SOL is known to be difficult because SOL does not accept 18-decimal currencies (which is the decimal count of the \$2030 ETH token). It is also known that bridging and going multi-chain works well only when planned from before initial launch. Therefore, when bridging when not already planning to bridge, excessive cost, time, and energy are the result. As a case study, \$JESUS bridged from ETH to SOL as a multichain but had to build a custom bridge at high cost, and even then, liquidity is lower on the SOL side. They got it working, but it was costly and their community had to donate a lot of \$JESUS tokens to make it happen. Our launching of an ADDITIONAL \$2030 token on SOL from scratch circumvents these types of problems.

Why not leave ETH and migrate to SOL?

This would entail leaving the ETH \$2030 token to die, which we would never do. This would also present the question of how current holders could be given their same percentage allocations (that they bought in ETH) in SOL. When considering the details of doing this, it could end up as a logistical nightmare.

How can the current \$2030 ETH token holders benefit from the existence of the SOL \$2030 token as a completely separate, non-bridged currency?

The \$2030 community would naturally hear about the launch at a very early stage, providing them with a chance to get in on the SOL \$2030 token before the wider market, simply by virtue of seeing announcements before others. However, in pump.fun, there are no pre-allocations, so this keeps the launch fair. The team hopes that the launch of the \$2030 SOL token can provide value to the \$2030 community as early adopters in the form of efficient dollar-cost averaging on the long-/short-term investment of buying the \$2030 SOL token.

Why pump.fun?

The Team would like to reiterate that the SOL token is "not a pump & dump situation." However, the Team knows: Some people will sell short term, some will hold long term, and some will do both. The Team's sentiment is clear:

"We want people to make money, and we want the New World Order kabal to make them that money. That's what flipping the kabal should be for. And people winning validates our concept even further. But we, as the developers, are here until 1B mcap and beyond, like before. Nothing changes for us. We are not motivated by short-term greed. We are motivated by building long-term value."

The big merit of pump.fun is the free liquidity upon bonding, which reduces launch cost, and the chance for new exposure, with a lot of eyes still facing in the SOL/pump.fun direction. The Team also surmises that the launch of an additional \$2030 token on SOL is a unique offering:

"We think that with the current community and 9+ months of activity behind us, we could become trusted immediately. Even though we are launching a 'new token', we are not a new project, so we are not your average pump.fun launch. Token burn milestones would be carried out as well."

What security and trust mechanisms will be put in place?

Treasury/team wallets will be disclosed and locked immediately after those wallets procure their holdings soon after minting. X posts will be made to disclose this information. Any relationship between those wallets as seen on Bubble Maps, etc., will thus be clear as to reason and intent.

What actions will be taken to reduce sell pressure?

As with the \$2030 ETH token, a program for token burn milestones will be announced soon after minting. In addition, also similarly to the \$2030 ETH token, the project's Dividend Giveaway Program will also be applied to the SOL token, with any wallet holding over 7.31% of the \$2030 SOL token being awarded automatic entry into the program's giveaways. Details on this program will be released very soon after minting.

"Take the existing rules and break them." – Sun Tzu, *ART OF WAR*

About the TWENTY-THIRTY.io (\$2030) project

As a "meme coin for FREEDOM", the \$2030 project disrupts the NEW WORLD ORDER (NWO)/Agenda 2030 and "flips the misdeeds of the NWO kabal into memes, fun, and investment". With a dev team based in Tokyo, Japan, \$2030 is the only crypto project that commodifies the debts to society of the NWO kabal.
