

TWENTY-THIRTY.io Announces Project Fundamentals

Driving safety/trust/transparency/confidence: \$2030 considered to be one of the safest, most-trustful long-term crypto projects in existence

Tokyo, Japan — Today, TWENTY-THIRTY.io announces complete details on its fundamentals, along with information on how safety/trust/transparency/confidence has been built into the project. The founders, creators, and developers (hereinafter referred to as the "Development Team") surmise that the \$2030 project could be one of the safest, most-trustful crypto projects in existence, against the backdrop of the project's extremely long-term nature of at least 15-20 years or more.

In long-term investing, strong fundamentals that can be confirmed are essential. With that in mind, here is some information on the fundamentals of the \$2030 project.

LONG-TERM NATURE

- Will be one year old on 2025-07-14
- Project time horizon of at least 15-20 years

COMMITMENT OF THE DEVELOPMENT TEAM

- Approaches project as high-value-added business that provides value to customers (investors)
- Constantly communicates with market on actions, plans, goals, thus building transparency/confidence

PERFORMANCE

- \$2030 on ETH: Has hit highs in the realm of +200,000% to +400,000% over launch price, now stable at 22,745% over launch price
- \$2030 on SOL: Has hit highs in the realm of +300% over launch price, now stable at close to 50% over launch price about a month ago

ACTIONS TAKEN BY THE DEVELOPMENT TEAM TO REDUCE SELL PRESSURE

- Large portions of treasury/team wallets for \$2030 on ETH locked, SOL wallets not holding large amounts*
- \$2030 on ETH liquidity locked until 2049*
- Token burns set to market cap milestones*
- Giveaways/contests exclusive to \$2030 holders already implemented and continuing*

* See previous press releases at: <https://twenty-thirty.io/pressreleases.html>

4 Ms OF INVESTING (MOAT, MANAGEMENT, MARGIN OF SAFETY, MEANING)

MOAT:

- First to market with its particular narrative/use case, etc.
- Low bottleneck toward mass adoption
- Developers very active toward reducing bottlenecking for buying/holding, i.e., strengthening the project's trust/transparency/confidence, building deeper levels of value into the project, building out the project's library of original artwork, continuously communicating with market
- Highly art-focused/creates own original artwork and memes, hard for competitors to duplicate

MANAGEMENT:

- Proven to be honest, can take responsibility, shows leadership, shows high integrity and good character befitting of the duty & care of a good manager, does what they say, says what they do
- Shown to be highly competent
- Seeks to constantly assess, review, and improve the project

- Highly engages with the market on a daily basis
- Highly active on social media accounts / TG
- Transparent about shortcomings, how to improve them, what will be done/when
- Constantly seeks input from the \$2030 community so as to include them in project trajectory

MARGIN OF SAFETY:

- Never used MEV bots
- Never used volume bots
- Never used X bots
- Never paid for KOLs
- No fake hype cycles
- No manufactured pump & dumps
- No cabal
- No manufactured hype of any kind
- Grassroots, completely organic growth only
- Highly asymmetrical, high degree of undervaluation given these fundamentals
- Project partially fueled and throttled by the project's inverse tracking of the notional value of the debts to society of the New World Order kabal
- Built-in value creation mechanism exists, project tied to something of high notional value (The worse the New World Order/Agenda 2030 gets, the more power the project could have.)
- Narrative proven as a PoC
- Large potential market: High number of people globally awake to the New World Order, indicating a high degree of undervaluation in the market and high customer potential

MEANING:

- Narrative/use case easy to understand and transmitted clearly/simple
- Aims to solve a problem/can help society, presents viable way to do so
- High degree of viability for actually solving the problem targeted
- Project's narrative/use case/concept validated by the market and by chart history

SWOT ANALYSIS (STRENGTHS, WEAKNESSES, OPPORTUNITIES, THREATS)

STRENGTHS:

- First to market for the concept of "debt as an asset" for the NWO kabal
- Perfectly timed: 5+ years to culmination of Agenda 2030, 5+ years of growth chance available
- Long-term viable, Agenda 2050 also on horizon, new ways to recreate, at least 15-20 more years (probably more) of timeline still available
- Strong use case, trustable/likeable/fun/sensible
- Can easily resonate with awake market, narrative likable
- Value built in (based on belief in the societal debt of the NOW kabal, which is widespread)
- Strong early adopter community, strong supporters
- Healthy chart/price history
- Premise innovative and explores financial concepts/abstract means of leverage as a tool, basically a new asset class (societal debt derivative, CDO-like)
- Has potential to elevate early adopters and raise QOL for many against the backdrop of the inevitable New World Order/Agenda 2030, even at minor critical mass
- Project still very young, highly asymmetrical for early adopters
- Numerous measures taken to ensure trust
- Dedicated/active development team committed to long-term project success
- Has own original artwork, original concept/narrative
- NFTs strong, helping to create resources for the project, helps marketing, brings benefits to holders
- Lots of actions taken to reduce sell pressure
- Strong TG experience (stickers, constant communications, gifts)

- Has an online shop, reinforcing strength of project as a brand and builds trust

WEAKNESSES:

- LP on \$2030 on ETH could be higher
- X followers could be higher, TG members could be higher
- Project needs more large supporters
- Trading volumes sometimes low
- Tendency for some non-committed holders to sell on market upswing
- Sometimes hard to keep market attention amid launches of new shiny "meme coins"

OPPORTUNITIES:

- Massive awake market easy to resonate with narrative, critical mass could have societal power
- Numerous ways available to steer project, large creative canvas, Agenda 2050 looming
- Long-term nature ensures pathway for growth, creates limit on competitors that can't last

THREATS:

- Market downturns (not within the project's sphere of control)
- Hacking of team/project wallets or the smart contract itself
- Regulatory/legal threats (not within the project's sphere of control)
- Emergence of strong competitors with different narratives (only a short-term threat)

\$2030 COMMUNITY

- Fully organic community that resonates with the project's narrative/use case
- Small but dedicated, holders DON'T sell
- Worked day & night to help graduate the SOL token in April 2025
- Valued as close collaborators
- Sometimes spearhead donations/giveaways
- Provide market insight and high technical expertise, craftsman-like
- Takes part in grassroots promotional campaigns
- Polls on project direction, helping to cement community viewpoints into the project

Against this backdrop, the Development Team comments:

You won't see a long-term crypto project this level of fundamentals anywhere.

About the TWENTY-THIRTY.io (\$2030) project

A tokenized movement & community for FREEDOM, the \$2030 project disrupts the NEW WORLD ORDER (NWO)/Agenda 2030 and "flips the misdeeds of the NWO kabal into memes, fun, and investment". With a development team based in Tokyo, Japan, \$2030 is the only crypto project that commodifies the debts to society of the NWO kabal. The project's goal is 1 billion USD in market cap by/before year 2030. The project's time horizon is 15-20 years or longer.
