A memetic, cryptographic hedge fund for freedom

TWENTY-THIRTY.io Announces Fourth Token Burn Tied to Debt Index Oracle Milestones

Societal debt up, supply down: $2030 executes fourth burn in its deflationary inverse peg system

Tokyo, Japan — TWENTY-THIRTY.io ($2030) announces today the execution of a fourth major token burn directly linked to its proprietary Debt Index Oracle.

The Debt Index Oracle is a custom on-chain, AI-driven sentiment index (on Base) and a seven-part piece of project infrastructure that quantifies verifiable "debts to society" imposed by what is known around the world as the "NEW WORLD ORDER kabal" (NWO kabal)[*1]—the entrenched, shadowy, global power structure believed in by approximately 1 billion people worldwide (approx. 20% of all adults globally)[*2]—600 million of which are crypto users.

[*1] https://x.com/twentythirty_io/status/2079164160441745511?s=20
[*2] Based on public polling by YouGov/Public Policy

In $2030's deflationary peg system, when new societal debt thresholds are reached, the project executes treasury burns to create reflexive deflationary pressure. This turns rising societal debt into measurable scarcity for $2030 holders ("debt up -> scarcity up"), forming a perpetual asymmetrical flywheel.

The initial burns triggered by specific Debt Index Oracle calculations have so far acted as a sort of "catch-up"—grandfathering in a number of past measurable debts to society, with the fourth also following suit, with many more to come. These actions demonstrate $2030’s core mechanism: as systemic debts grow, token supply is deliberately reduced, creating long-term scarcity and asymmetry for holders. This mechanism essentially pegs the value of $2030's tokens to the rising debts to society of the NWO kabal.[*3]

[*3] The project also conducts burns for other reasons (such as when hitting market cap milestones), in order to reduce sell pressure during major growth phases. See here and here.

Details on the $2030 Debt Index Oracle Burn Event 4
1900–2026: Multi-layered perpetual taxation of already-taxed money (globally)
Quantified amount: 100 trillion USD

- Same unit of currency taxed repeatedly across its entire lifecycle in virtually every country: Earned (income tax) -> spent (sales/VAT/excise) -> invested or sold (capital gains) -> gifted -> inherited (estate tax) -> spent again, plus endless ancillary taxes (property, licenses, transaction fees, etc.)
- Creates an infinite extraction cascade on every economic act—original money never fully escapes taxation
- One of the most-personal and -pervasive debts to society: Every individual feels this cycle daily with no escape
- Results in a multi-decade attack on the personal sovereignty of every human on Earth, in modern times
- Amount concluded based on World Bank / IMF / OECD historical tax revenue and tax-to-GDP data, academic studies on deadweight loss of taxation (NBER, IMF working papers), and global historical GDP compilations (Our World in Data).

Reasoning: How we defend the 100T USD valuation for multi-layered perpetual taxation of already-taxed money (1900–2026)

This is one of the strongest and most defensible debts in the entire $2030 Debt Index Oracle because it is and has been) pervasive, personal, and mathematically compounding—every single person on Earth feels it in their daily life with no realistic escape.

Core argument: The "infinite extraction cascade"

The same unit of money is taxed repeatedly across its entire lifecycle in virtually every modern country:

- Earned -> Income tax
- Spent -> Sales/VAT/excise tax
- Invested or sold -> Capital gains tax
- Gifted -> Gift tax
- Inherited -> Estate/inheritance tax
- Spent again -> Sales tax again
- Plus endless ancillary taxes (property, licenses, transaction fees, inflation tax via debasement, etc.)

This creates an infinite extraction loop on every economic act over the past 126 years (1900–2026), since basically the start of the Industrial Revolution. The original money never fully escapes taxation. It is the most-personal debt to society imaginable—it touches your paycheck, groceries, home, retirement, and what you leave your children.

Why 100T USD is reasonable and conservative

This quantification is anchored in real institutional data:

- **Direct tax revenue:** World Bank, IMF, OECD, and Our World in Data show global tax-to-GDP ratios averaging 12–18% since the mid-20th century (lower earlier in 1900). Cumulative global tax revenue since 1900 is in the $150–250 trillion range (nominal).
- **Deadweight loss:** Repeated taxation disincentivizes work, saving, investment, and entrepreneurship. Academic studies (NBER, IMF working papers) estimate deadweight loss at 20–50%+ of tax revenue in many systems. Conservatively, this adds $50–100 trillion in lost economic activity over 126 years.
- **Generational wealth destruction:** Estate and gift taxes, combined with inflation, destroy family capital across generations. This compounding effect is massive but hard to overstate.
- **Inflation tax layer:** Post-1913 fiat systems (especially 1971 Nixon Shock onward) act as a hidden tax, further eroding purchasing power.
- **Total:** 100T USD is a rounded, conservative figure that stays well below the upper end of verifiable cumulative extraction. It is consistent with the methodology of $2030's Debt Index Oracle (direct costs + multipliers for long-term harm).

Why this debt to society is egregious and long-standing

It is perpetual—there is no point in the money's life where it is truly "yours" free and clear. It attacks personal sovereignty more directly than almost any other societal debt. It is, indeed, universal—felt by every working person, saver, and family in the modern world. Governments have known this for decades yet continue (and often increase) the layering. This is not a one-time event—it is a structural feature of the post-1900 fiat/taxation system. It belongs in the $2030 Debt Index Oracle as a foundational, multi-decade debt.

$2030's burn calculation protocol

0.00002030 [0.002030%] × Total existing supply = No. of tokens to burn × Amount of quantified debt in USD trillions

Burn Event 4 details

- **ETH chain:** Existing supply at time of burn (405,881,468,838,672.5) × 0.00002030 = 8,239,393,817.425052 × 100 (USD trillions) = 823,939,381,742.5052 $2030 tokens
- Executed: 2026-07-19
- https://etherscan.io/tx/0xfcf87f2b4385358ffe77266d84d9eb7500c3e7d3b3ac312c938f1b0df8d6f92f

- **SOL chain:** Existing supply at time of burn (992,195,742.371644) x 0.00002030 = 20,141.57357014437 × 100 (USD trillions) = 2,014,157.357014437 $2030 tokens
- Executed: 2026-07-19
- https://solscan.io/tx/4PRbZMT51tF33AGxz9EQv7ZcVDodgVJgkQvUjrYNCqaHGdYMEG7UKi8H4jSBHY48zT9ji5UDyz9YHQsE1kwNxUuD

Details on previous $2030 Debt Index Oracle burn events

Burn Event 1 – Aggregate Baseline Catch-up (1900–2025) ($240 trillion)

- Comprehensive catch-up burn for the full historical baseline of quantified NWO kabal debts to society from 1900 to 2025, as seen here (Note: The amount of 240T USD was recorded in the genesis block of the

Debt Index Oracle's smart contract creation on Base, but the burn itself was conducted manually at a later date.)
- ETH: 1,987,741,109,172 $2030 burned (0.002030% × 407.9928385T × 240) Link
- SOL: 4,859,159 $2030 burned (0.002030% × 997,364,518 × 240) Link
- Executed: 2026-02-08

Burn Event 2 – EU eIDAS 2.0 "Digital Chains" ($25 trillion)
- Mandatory digital ID rollout enabling surveillance, biometrics, CBDCs, and sovereignty erosion across 450M+ Europeans
- ETH: 207,161,500,000 $2030 burned (0.002030% × 408.2T × 25) Link
- SOL: 507,500 $2030 burned (0.002030% × 1B × 25) Link
- Executed: 2026-02-08

Burn Event 3 – Gender Dysphoria Medicalization ($15 trillion)
- Societal costs from child mutilation rapid medicalization, psychological harm, fertility loss, and ideological capture since 2010
- **ETH:** 123,628,552,155 $2030 burned (0.002030% × 406.005T × 15) Link
- **SOL:** 302,217 $2030 burned (0.002030% × 992.5M × 15) Link
- Executed: 2026-03-01

Total supply of $2030 on ETH (as of this writing): 405,057,529,456,930 $2030 (originally 420T)
Total supply of $2030 on SOL (as of this writing): 990,188,983 $2030 (originally 1B)

Complete information can be seen here: https://twenty-thirty.io/debt-index-oracle.html

As the architecture of control expands and societal debts compound, $2030 functions as a deliberate counterweight—systematically converting institutional extraction into verifiable scarcity. Debt rises, supply contracts. The more the system entrenches itself, the greater the asymmetry for those positioned on the other side of the ledger. This is not speculation. It is structured resistance, encoded in code and carried by conviction.

About TWENTY-THIRTY.io ($2030)
Launched in July 2024 from Tokyo, Japan, $2030 is the world's first memetic/cryptographic hedge fund. It's the only crypto project in the world that commodifies the debts to society of the NEW WORLD ORDER kabal. $2030 uses the meme coin vehicle to deliver a sophisticated financial product.

At the core is an AI-driven, on-chain decentralized sentiment index that quantifies societal debt and triggers token burns when thresholds for verifiable debts are breached, creating token scarcity. This creates a two-pronged perpetual motion narrative machine—it's built-in asymmetry at any market cap.

With a time horizon extending to year 2030 and onto 2050, $2030 is essentially a long-term "memetic externality arbitrage strategy"—systematically long the monotonic rise in these debts to society while embedding deflationary scarcity that turns societal decay into asymmetric alpha. The worse things get, the more $2030 "proves" its thesis. It's 2nd-grade math: debt up = price up. It's DOOM into BOOM. It's karmic law via blockchain.
